Proposal Changes

- Model and initialization
 - Using GFS V9.01 (current operational GFS) instead of GFS V8.00
 - Improved Ensemble Transform with Rescaling (ETR) initialization
 - Improved Stochastic Total Tendency Perturbation (STTP)
- Configurations
 - T254 (55km) horizontal resolution for 0-192 hours (from T190 – 70km)
 - T190 (70km horizontal resolution for 192-384 hours (same as current opr)
 - L42 vertical levels for 0-384 hours (from L28)
- Add Sunshine duration for TIGGE data exchange
- Part of products will be delayed by approximately 20 minutes
 - Due to limit CCS resources
 - 40-42 nodes for 70 minutes (start +4:35 end: +5:45)
- Unchanged:
 - 20+1 members per cycle, 4 cycles per day
 - pgrb file output at 1*1 degree every 6 hours
 - GEFS and NAEFS post process output data format
- Why do we make this configurations?
 - Considering the limited resources
 - Resolution makes difference (example of T126 .vs T190)
- What do we expect from this implementation?
 - Preliminary results (NH 500hPa and SH 500hPa height and tracks)

Retrospective runs for 2010 hurricane season
